SUMMARY

Final-year B.Tech (CSE, AI & ML) student with internships in NLP, machine learning and computer vision. I build ML systems that are checked against baselines and covered by tests, then ship them as working apps. Finalist in 7+ national hackathons.

EDUCATION

Sanskriti University, Mathura Aug 2023 – Jun 2027
B.Tech, CSE (AI & ML). CGPA 8.50 / 10.

SKILLS

Languages: Python, C++, TypeScript, JavaScript, Java, SQL.

ML / CV / NLP: scikit-learn, PyTorch, TensorFlow, pandas, NumPy, OpenCV, MediaPipe, YOLO, BERT, TF-IDF, LLM APIs.

Engineering: FastAPI, Flask, Express, React, Next.js, SQLite, Docker, Git, pytest.

EXPERIENCE

Computer Vision Intern, Ethernet Robotics Jul 2026 – Sep 2026

- Tested and validated computer-vision modules for robotics applications.

Machine Learning Intern, Ganpat University (SSRIP) May 2026 – Sep 2026

- AI-Based Real-Time Crime and Safety Risk Prediction System: built a hybrid fusion model on a Kaggle dataset, reaching 89% accuracy.

NLP Intern, Ganpat University (WSRIP) Dec 2025 – Apr 2026

- Built a resume-screening app that ranks candidates against a job description with TF-IDF, BERT, hybrid and ensemble scorers, skill-match percentages, and PDF/DOCX/TXT upload with CSV/Excel export (code).

IT Intern, Embedded AI, CCRAS (Govt. of India) Jun – Jul 2025

- Built real-time exercise and motion detection with OpenCV and MediaPipe (92% accuracy).

PROJECTS

StockWise AI: demand forecasting and reorder recommendations | FastAPI, Next.js, scikit-learn | GitHub

- Compares a moving-average baseline with seasonal-naive and random-forest models on a chronological holdout (MAE/RMSE) and picks the best per product. On the synthetic sample data, random forest cut MAE from 6.57 to 4.13 (SKU-1001) and 10.43 to 3.90 (SKU-1006), while the baseline won 3 of 7 products.
- CSV validation pipeline, safety-stock and reorder-point logic, Alembic migrations, 94 backend and 11 frontend tests.

VisionInspect Pro: explainable visual quality inspection | YOLOE, OpenCV, FastAPI, Next.js | GitHub

- OpenCV image-quality checks and a YOLOE detector (prompted with text and 15 reference photos, no training run) produce a PASS / REJECT / REVIEW decision that cites the rule behind it. 20 of 24 labelled photos decided correctly; not a validated inspection system.

BookLeaf: AI-assisted author support portal | React, Express, TypeScript, Claude API | GitHub | Live

- LLM ticket triage (category, priority) and grounded reply drafts with schema-validated output, timeouts and a rule-based fallback; evaluation script on 27 labelled tickets (rule baseline: 96% category, 70% priority). Role-based auth, SSE live updates, 55 tests.

Grace: gesture and voice healthcare assistant | Python, OpenCV, MediaPipe, Streamlit | GitHub | Demo

- Hackathon project for hands-free medical documentation using speech-to-text and gesture control, with patient-record analysis scripts over hospital data.

OPEN SOURCE AND LEADERSHIP

- Open-source pull requests: Open Food Facts (#13129, in review), Joplin (#14601), CircuitVerse (#7024), Submitty (#12473).
- Co-founder, AI Digitals and Unstoppable Coders; President, Technical Club. Mentored 300+ students across 15+ workshops.
- Hackathons: finalist in 7+ national events (Flipkart GRiD, SIH 2025, Walmart Sparkathon). LeetCode: 1,100+ problems solved, global rank ~25.9K, 500-day badge.
